***Allowance of Application # 09/903,522***

1. The following communication is in response to applicant's Amendment received 1-October-2004 and applicant's Terminal Disclaimer received on 2-January-2004.

***Reasons for Allowance***

2. The following is an Examiner's Statement of Reasons for the indication of allowable subject matter. The instant application is directed to a non-obvious improvement over the information described in the article authored by Toye et al., entitled *SHARE: A Methodology and Environment for Collaborative Product Development*, and the article authored by Kempfer, entitled *Tools for Web Collaborations*. The improvement comprises a server-based system for a fabricator evaluating detailed instructions contained within a request for a proposal to view a design model, wherein the design model, the designer and the fabricator are connected over a network from separate locations, and whereby a software component, resident at the server system, is accessible by the designer and the fabricator at their respective locations, the software component including a substantially platform independent client side application from which the fabricator has access to manipulate the model design. This patentable distinction and the related embodiments are included in each of the independent claims, nos. 19, 32 and 42. Furthermore, the articles authored by Werkman (et al.) , entitled *Designer Fabricator Interpreter System* and *Negotiation in DAI as an Infrastructure Component for Collaborative Enterprises*, both disclose a distributed knowledge-based system for evaluating alternate connection configurations through multi-agent negotiation, but do not disclose allowing the fabricator to actually manipulate the design while viewing the proposal. The art of record, either individually

or in combination, fails to teach, suggest, or render obvious the useful, concrete and tangible <server-based system for a fabricator evaluating detailed instructions to view and manipulate a design model> having the corresponding structure which is disclosed in the specification and equivalents thereof at least at page 16, line 8 through page 105, line 14, and Figures 1-28. In view of the foregoing, the claims of the present application are found to be patentable over the prior art.

***Response Guidelines***

3. Any comments considered necessary by applicant **MUST** be submitted no later than the payment of the Issue Fee and, to avoid processing delays, should preferably accompany the Issue Fee. Such submissions should clearly be labeled "Comments on Statement of Reasons for Allowance".

4. Any response to the Examiner in regard to this allowance should be
